

MUTHUVISALI RAVICHANDRA BOSE

MBA + MS-MIS, University of Arizona | AI/ML | Data Science | Product Management
visaliravi4@gmail.com | [LinkedIn](#) | [Portfolio](#) | [Git](#) | +1 520-286-1560 | Tucson, AZ (Open to Relocation)

EDUCATION

University of Arizona, Eller College of Management

Tucson, AZ

MBA, Business Administration & M.S., Management Information Systems

Coursework: Applied Business Statistics, Business Strategy, Enterprise Data Management, Big Data Technologies, Economics for Managers, Business Data Communications & Networking, Marketing of Innovations

SNS College of Technology

India

B.E., Electronics and Communication Engineering

WORK EXPERIENCE

University of Arizona | Tucson, AZ

Graduate Research Assistant

Aug 2025 – Present

- Built a **12-year** longitudinal dataset (**5,000+ records, 37 variables**) using Python and pandas, applying supervised learning-informed feature engineering, data cleaning, and time-series aggregation to support faculty behavioral research.
- Created **10+ publication-quality** visualizations using matplotlib and seaborn, applying analytical thinking and NLP-informed data analysis to support faculty and stakeholder reporting.

Graduate Teaching Assistant | Business Analytics

Aug 2025 – Present

- Supported Business Analytics course delivery and collaborated with MBA admin team on STEM accreditation and cross-departmental outreach, demonstrating clear communication with both technical and non-technical audiences.

Cognizant Technology Solutions | India

Associate

Jun 2023 – Jun 2025

- Drove SaaS workflow optimization using SQL-driven data analysis and automation, eliminating **100,000+ daily clicks** and boosting process efficiency and ROI through cross-functional collaboration with engineers and business leaders.
- Defined enterprise application requirements and technical specs, reducing API latency by **50%**; translated business problems into AI use cases through clear documentation for both technical and non-technical stakeholders.
- Ran SQL-driven business analysis to drive **3 feature improvements** and increase product adoption; led Agile delivery via JIRA, converting BRDs and user stories into prioritized roadmap milestones.

Programmer Analyst

Jul 2021 – May 2023

- Improved CRM stability by **40%** through automated workflow design; standardized **20+ PRDs and BRDs** improving technical documentation and communication across Agile teams through analytical problem-solving.

Programmer Analyst Trainee

Feb 2021 – Jun 2021

- Built Python automation workflows pushing testing coverage to **95%**, strengthening software release quality through structured problem-solving across the SDLC.

PROJECTS & AWARDS

Multi-Agent Supply Chain Finance Optimization — [Agentic AI Workflow](#) | [Honeywell & JPMorgan Case Study](#) | May 2026

- Built a **6-agent** agentic AI system using LangChain and Claude 3.5 Sonnet on a Honeywell-scope **\$900M+** JPMorgan procurement case study, orchestrating specialized agents for invoice validation, supplier risk scoring, working capital optimization, and financing recommendations using multi-step reasoning and tool-use patterns.
- Designed a governance layer enforcing treasury policy compliance via confidence thresholds (**>80%**), contradiction detection, and auto-escalation of high-risk decisions (amount **>\$5M** or risk score **>75**) with full audit trail, demonstrating human-in-the-loop oversight in autonomous LLM pipelines.

AI-Enabled Educational Platform — *Product Lead (Ongoing)* | **University of Arizona Immersion Learning**

- Building a production-grade RAG pipeline for a real client, implementing vector retrieval, structured generation, and citation-grounded outputs using modern LLM tooling.
- Leading a cross-functional team to design and deploy the end-to-end AI workflow layer, including orchestration, programmatic guardrails, and LLM-based evaluation.

Healthcare Admission Forecasting — [Project Report](#) | **MIS 584** | **Spring 2026**

- Built a 5-stage forecasting pipeline using PySpark + Prophet that achieved **52% MAPE reduction** (from 76% to 36%) on **10,000 hospital records**, directly supporting staffing optimization and revenue cycle planning.

Microsoft Games – Data & Analytics Platform — *Team Lead*

- Built SQL models and Tableau dashboards tracking product KPIs and industry trends, applying supervised learning-informed analytics and Python data analysis to improve product metrics through cross-functional collaboration

Coral Award – Best Young Mind: Recognized for leadership, creativity, and problem-solving in delivering impactful technology solutions.

SKILLS

AI & ML: Python, SQL, LangChain, LLMs, RAG, Prompt Engineering, Agentic AI, NLP, Embeddings, Transformers, Claude API, PySpark, PyTorch

Data & Tools: pandas, matplotlib, seaborn, Tableau, Excel, JIRA, Confluence, Agile & Scrum

Certifications: SAFe 6 Practitioner | Data Manipulation in SQL | Azure Fundamentals | Product Management First Steps
